LINEAR INTEGRATED CIRCUIT

HIGH-EFFICIENCY DC/DC CONVERTER

DESCRIPTION

The UTC 3563 is a monolithic control circuit containing the primary functions required for DC to DC converters and highside-sensed constant current source. The device consists of an internal temperature compensated reference, comparator, controlled duty cycle oscillator with an active current sense circuit, bootstrapped driver, and high current output switch. This device is specifically designed to construct a constant current source for battery chargers with a minimum number of external components. Bootstrapped driver can drive the NPN output switch to saturation for higher efficiency and less heat dissipation. The UTC 3563 can deliver 1.5A continuous current without requiring a heat sink.

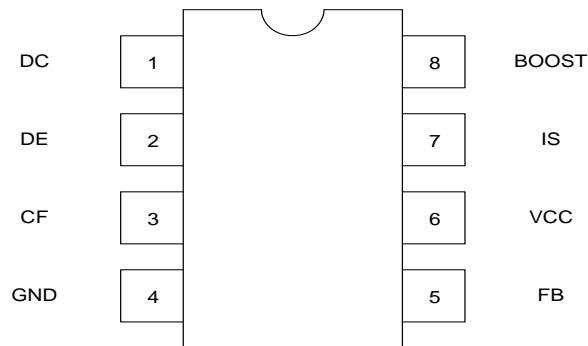

FEATURES

- *3V to 30V input voltage operation.
- *Internal 2A peak current switch.
- *1.5A continuous output current.
- *Bootstrapped driver.
- *High side current sense capability.
- *High efficiency (up to 90%)
- *Internal $\pm 2\%$ reference.
- *Low quiescent current at 1.6mA.
- *Frequency operation from 100Hz to 100KHz.

APPLICATIONS

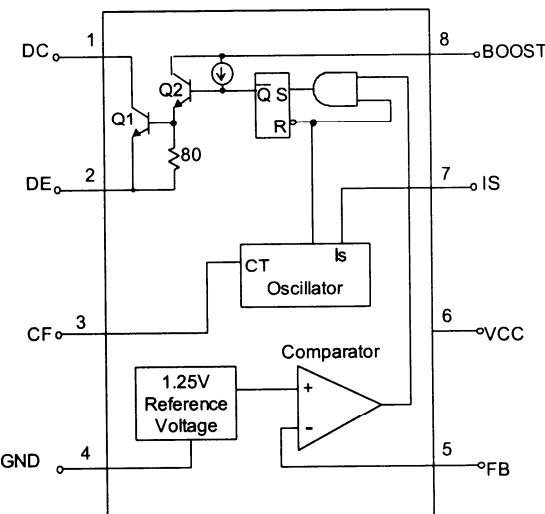

- *Constant current source for battery chargers.
- *Saver for cellular phones.
- *Step-Down DC-DC converter module.

C_o	$\frac{I_{C(SWITCH)} (t_{ON}+t_{OFF})}{8V_{RIPPLE(P-P)}}$	$\frac{I_{OUT} t_{ON}}{V_{RIPPLE(P-P)}}$

 V_{SAT} : Saturation voltage of the output switch V_F : Forward voltage of the ringback rectifier

The following power supply characteristics must be chosen:

 V_{IN} : Norminal input voltage V_{OUT} : Desired output voltage, $V_{OUT}=1.25(1+RB/RA)$ I_{OUT} : Desired output current F_{MIN} : Minimum desired switching frequency at selected values for V_{IN} AND I_{OUT} $V_{RIPPLE(P-P)}$: Desired peak-to-peak output ripple voltage. In practice, the calculated value will need to be increased due to the capacitor equivalent series resistance and board layout. The ripple voltage should be kept to a low value since it will directly affect the line and load regulation.
