03N60-KW Preliminary Power MOSFET

0.3A, 600V N-CHANNEL POWER MOSFET

■ DESCRIPTION

The UTC **03N60-KW** is a high voltage power MOSFET and is designed to have better characteristics, such as fast switching time, low gate charge, low on-state resistance and have a high rugged avalanche characteristics. This power MOSFET is usually used at high speed switching applications in power supplies, PWM motor controls, high efficient DC to DC converters and bridge circuits.
