

## U8C3525

Preliminary

LINEAR INTEGRATED CIRCUIT

### 8 BIT SERIAL-IN PARALLEL-OUT VALVE DRIVER

#### DESCRIPTION

The **U8C3525** is an 8-Bit Serial-In Parallel-Out driver with Error Detection to the solenoid valve drive. The device incorporates shift registers, data latches, and constant current circuitry on the silicon CMOS chip. The maximum output current value of one channel is Approximately limited to 250mA by Built-in constant current source.

The **U8C3525** has two power supplies,  $V_{DD}$  provides power to Internal control and communication modules. The range of  $V_{DD}$  is 5V to 18V.  $PV_{DD}$  is used to absorb the inductive coil reverse-phase current and the range of  $PV_{DD}$  is 5V to 35V.

Its built-in open/short detection circuits help users detect Load state of the detection channels. System retrieve the error messages to indicate which channel has failure by serial output data.

#### FEATURES

- \* $V_{DD}$  range:  $V_{DD}$  5V to 18V  
 $PV_{DD}$  5V to 35V
- \*Maximum clock frequency: 1MHz
- \*current limit of Each channel: 250mA
- \*Built-in open/short detection
- \*Short protect
- \*Detecting response
- \*Internal reverse diode of  $PV_{DD}$  to Absorb reverse current from coil

#### ORDERING INFORMATION

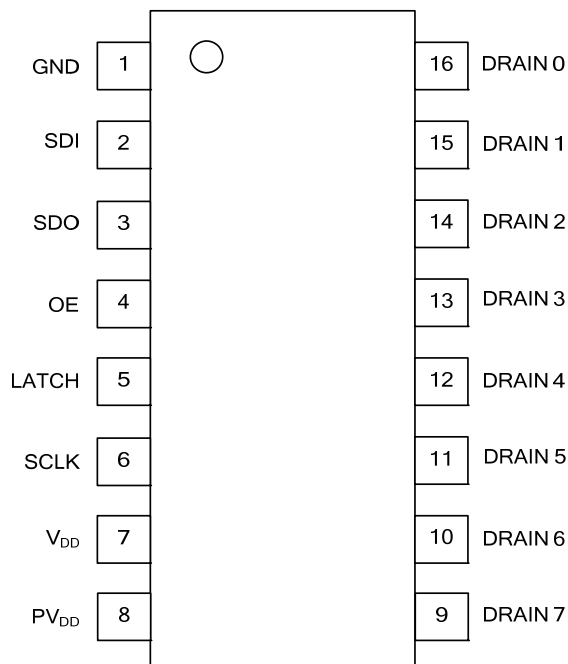

Ordering Number	Package	Packing
U8C3525G-S16-R	SOP-16	Tape Reel

### MARKING

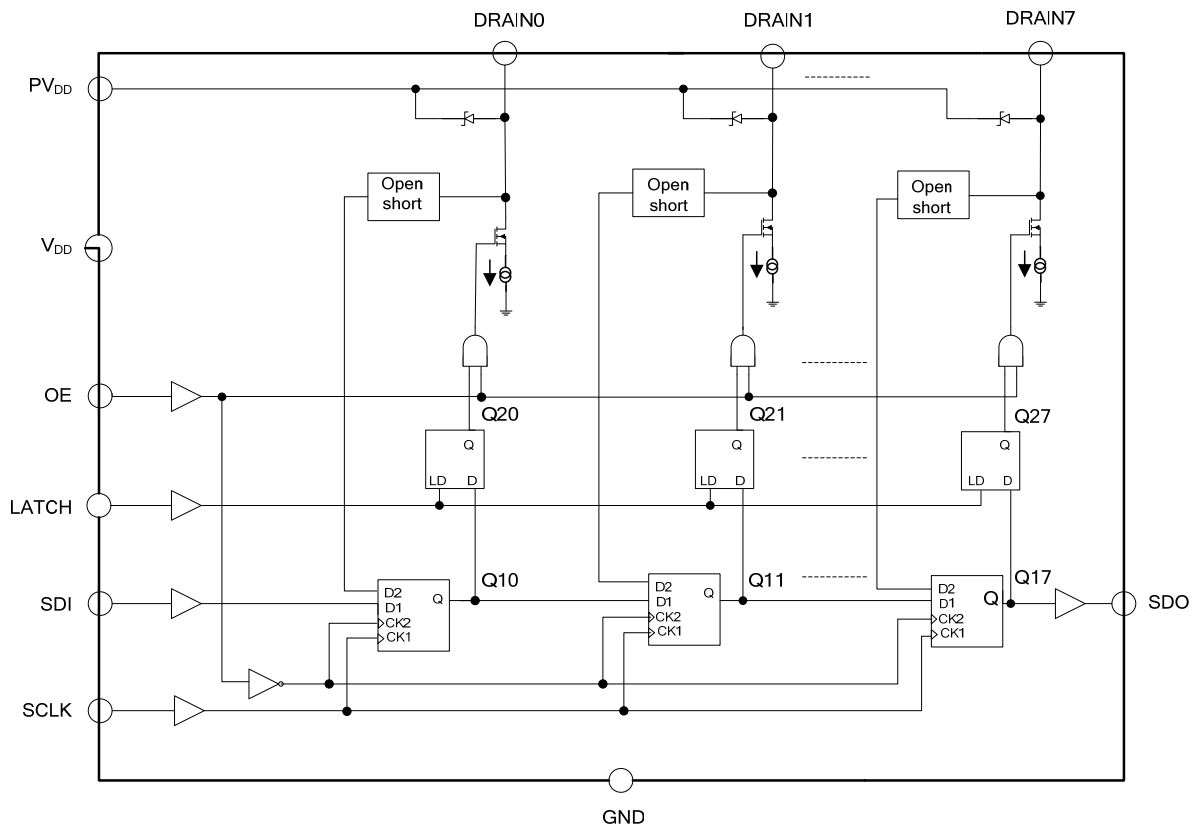

### PIN CONFIGURATION

### PIN DESCRIPTION

PIN NO.	PIN NAME	DESCRIPTION
1	GND	Ground terminal
2	SDI	Serial data input terminal.
3	SDO	Serial data output terminal.
4	OE	Output enable terminal: 'L' for all outputs are turned off, 'H' for all outputs are active.
5	LATCH	Input terminal of data strobe. Data on shift register goes through when 'H'. Otherwise, data is latched.
6	SCLK	Synchronous clock input terminal for serial data transfer. Data is sampled at the rising edge of SCLK.
7	$V_{DD}$	Supply voltage terminal.
8	$PV_{DD}$	Power Supply voltage terminal. To absorb the inductive load reverse current of Driver-side
9-16	Drian0 ~ Drain7	Sink constant-current outputs (open-drain).

■ BLOCK DIAGRAM

### ■ ABSOLUTE MAXIMUM RATING

PARAMETER	SYMBOL	RATINGS	UNIT
Voltage On Terminals	$V_{DD}$	-0.5 ~ 18	V
Voltage On Terminals	$V_{IN}$	-0.5 ~ $V_{CC}+0.5$	V
Power Dissipation (Temperature=25°)	$P_D$	1	W
Operational Temperature Range	$T_J$	-30 ~ +70	°C
Storage Temperature Range	$T_{STG}$	-40 ~ +150	°C

Note: Absolute maximum ratings are those values beyond which the device could be permanently damaged. Absolute maximum ratings are stress ratings only and functional device operation is not implied.

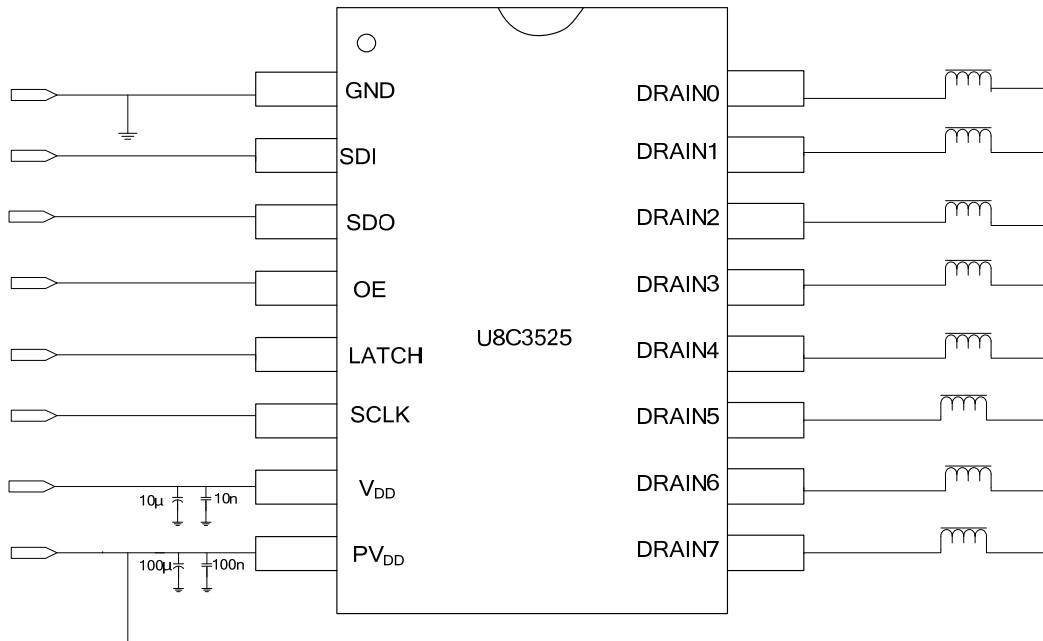

### ■ RECOMMENDED OPERATING CONDITIONS

PARAMETER	SYMBOL	MIN	TYP	MAX	UNIT
Power Supply	$V_{DD}$	5	12	18	V
Power Supply	$PV_{DD}$	5		35	V
Input Digital Clock Frequency	$f_{SCLK}$			1	MHz
SCLK Pulse Width	$T_{SCLK}$	450			ns
LATCH Pulse Width	$T_{LATCH}$	450			ns
OE Pulse Width	$T_{OE}$	2			us
OE to SCLK Rise	$T_{OE-SCLK}$	2			us

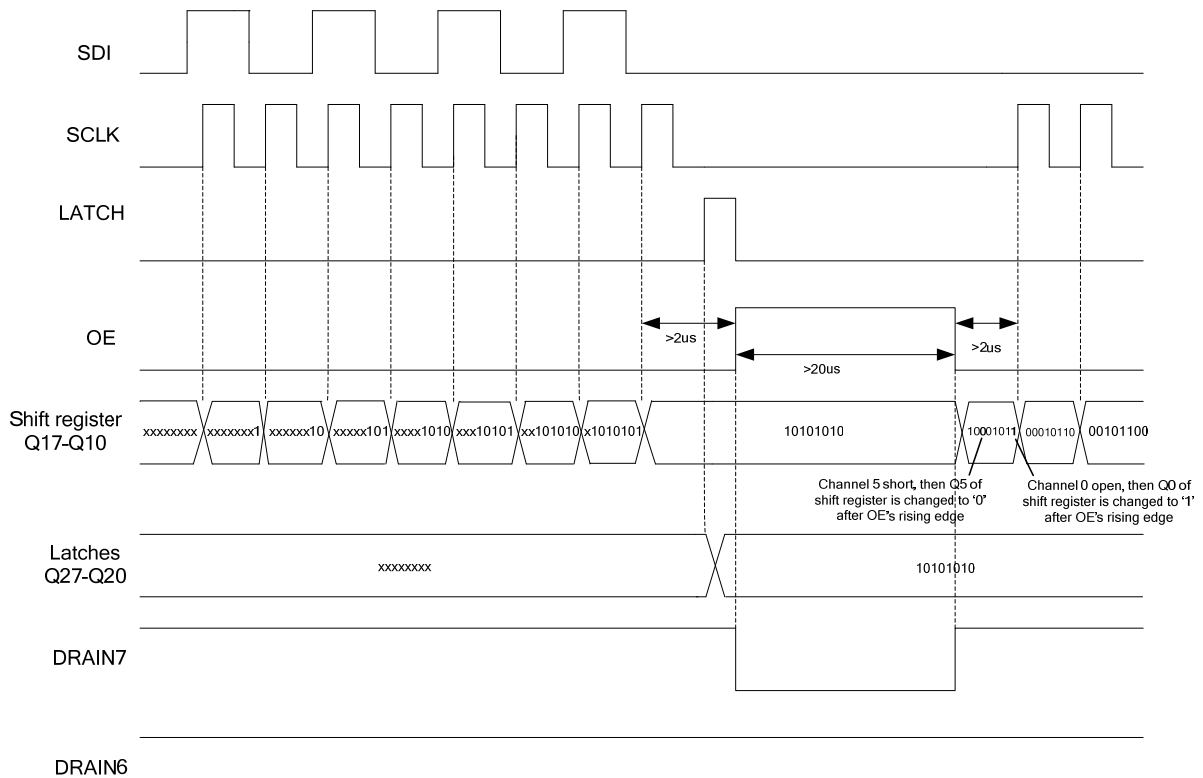

### ■ TIMING SEQUENCE PARAMETER ( $T_A = 25^\circ\text{C}$ , unless otherwise specified)

PARAMETER	SYMBOL	TEST CONDITIONS	MIN	TYP	MAX	UNIT
Supply Current	$I_{ON}$	$PV_{DD}=24V$ , Channel On		2.3		mA
Supply Current	$I_{OFF}$	$PV_{DD}=24V$ , Channel Off		1.9		mA
Output Voltage High (SDO)	$V_{OH}$			$V_{DD}$		V
Input High Voltage	$V_{IH}$		3		18	V
Input Low Voltage	$V_{IL}$				0.8	V
Limiting Current	$I_{LIMIT}$		250			mA/ch
Output Voltage of Each Channel	$V_{DS\_ON}$	Channel On, $I_{OUT}=150\text{mA}$			1	V
Maximum Power Voltage Supply	$V_{DS\_OFF}$	Channel Off	35			V

■ TYPICAL APPLICATION CIRCUIT

■ TIMING DIAGRAM

## ■ CIRCUIT DESCRIPTION

The **U8C3525** is an 8-Bit Serial-In Parallel-Out driver for Solenoid valve. The state of outputs Drain0 ~ Drain7 are controlled by the latch data Q20~Q27 and OE signal. When OE is high, if a channel corresponding data latch is 1, then the channel output is turned on, the switch from the output terminal to ground in the ON state.

**U8C3525**'s constant current technology make The maximum output current limited to around 250mA,which can effectively prevent the chip or peripheral devices from damaging caused by load short. If a channel corresponding data latch is 0, the output channel is switched off, in a high impedance state. When OE is low, no matter what the value of the latch data, the output channels are turned off. It can withstand high voltage above 35V when the outputs are turned off.

## ■ OPEN/SHORT DETECTION

The result of open/short detection of U8C3525 could be retrieved from serial-out (DAO) data. Once the load of a channel in Open state or short state, the chip can be detected in time and quickly Shutdown the load shorted channel which the chip from can overheating and external load. The test results stored to the shift register when OE Falling edge .It can be removed from SDO end of the serial at SCLK action reading back to the controller.

The controller will read back the data before sending out now Control data for comparison, if exactly the same, it means the load in good condition, no open short circuit, if a bit of data sent out is 1, 0 read back ,it indicates that the corresponding channel bit data load short circuit occurs, if a bit of data to send out is 0, 1 read back, the table Shows the bit data corresponding to the channel occurred Open load.
