

## L1131B

CMOS IC

## LOW NOISE 200mA LDO REGULATOR

## ■ DESCRIPTION

The UTC **L1131B** is a CMOS positive linear regulator. One of its features is the very low quiescent current typical as low as 1.5µA and its dropout voltage is extremely low with 200mA output current, and high ripple rejection. Each of these ICs consists of a voltage reference unit, an error amplifier, resistor-net for voltage setting, a short current limit circuit, a chip enable circuit, and so on.

These ICs perform with low dropout voltage and the chip-enable function. The supply current at no load of this IC is only 1.5µA, and the line transient response and the load transient response of the UTC **L1131B** Series are excellent, thus these ICs are very suitable for the power supply for hand-held communication equipment.

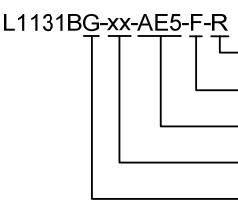

## ■ FEATURES

- \* Low supply current Typ. 1.5µA
  - \* Standby mode Typ. 0.1µA
  - \* Output Voltage Range 1.2V ~ 5.0V
  - \* Built-in fold back protection circuit
  - \* Ceramic capacitors are recommended to be used with this IC
- $C_{IN}=C_{OUT}=1\mu F$
