

U74LV1T32

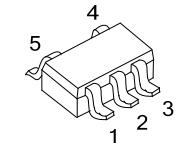

CMOS IC

SINGLE POWER SUPPLY
2-INPUT POSITIVE OR GATE
CMOS LOGIC LEVEL SHIFTER

■ DESCRIPTION

U74LV1T32 is a low voltage CMOS gate logic that operates at a wider voltage range for industrial, portable, telecom, and automotive applications. The output level is referenced to the supply voltage and is able to support 1.8V/2.5V/3.3V/5V CMOS levels.

The input is designed with a lower threshold circuit to match 1.8V input logic at $V_{CC} = 3.3V$ and can be used in 1.8V to 3.3V level up translation. In addition, the 5V tolerant input pins enable down translation (e.g. 3.3V to 2.5V output at $V_{CC} = 2.5V$). The wide V_{CC} range of 1.8V to 5.5V allows generation of desired output levels to connect to controllers or processors. The **U74LV1T32** is designed with current-drive capability of 8mA to reduce line reflections, overshoot, and undershoot caused by high-drive outputs.
